

AMENDMENTS TO THE SPECIFICATION:

On page 1 of the specification, replace the title beginning on the line numbered 1 with the following new title:

RESOURCE LOADER FOR APPLICATIONS THAT UTILIZE RELATIVE UNIFORM
RESOURCE IDENTIFIERS

On page 7 of the specification, replace the paragraph beginning on the line numbered 3 and ending on the line numbered 13 with the following paragraph:

System **200** typically includes ~~contain~~ communications connection(s) **212** that allow the system to communicate with other devices. Communications connection(s) **212** is an example of communication media. Communication media typically embodies computer readable instructions, data structures, program modules or other data in a modulated data signal such as a carrier wave or other transport mechanism and includes any information delivery media. The term “modulated data signal” means a signal that has one or more of its characteristics set or changed in such a manner as to encode information in the signal. By way of example, and not limitation, communication media includes wired media such as a wired network or direct-wired connection, and wireless media such as acoustic, RF, infrared and other wireless media. The term computer readable media as used herein includes both storage media and communication media.

On page 7 of the specification, replace the paragraph beginning on the line numbered 22 and ending on page 8 on the line numbered 2 with the following paragraph:

FIG. 3 illustrates functional components of a system for resource lookup and redirection according to an embodiment of the present invention. This example illustrates source files ~~301~~ 300 and a compilation and build system **301** that generates an application executable **332** that utilizes a resource loader **334**. Generally speaking, the source files **300** are used by the compilation and build system **301** to generate an application executable **332** that includes a resource loader **334** and possibly one or more resources **340** and **342**.

On page 15 of the specification, replace the paragraph beginning on the line numbered 5 and ending on the line numbered 8 with the following paragraph:

Invoke operation **815** then calls the resource loader identified in determination operation **810**. That is, the indicated resource loader for the resource being requested is ~~call~~called using the interface for that resource loader. Additionally, the resource identifier for the requested resource is passed to the called resource loader via the interface for that resource loader.
